

ECOCCEL

Packaging to be proud of

The brand of compostable and recyclable natural fiber food trays by Tav Food Group. We manufacture practical and economical packaging made from renewable cellulose, fully functional and adapted to all current needs. With minimal environmental impact and contributing to the reduction of carbon emissions.

Ecoocel is the natural alternative to single-use plastic packaging. Our sustainable food trays are 100% compostable and 100% recyclable with paper and cardboard, thus avoiding the plastic tax. In addition, their green dot rate is one of the lowest.

Food trays with maximum safety and minimal impact

At Ecoocel, we work with the highest standards of quality, food safety, and supply and service guarantee, complying with the strictest regulations and achieving the most demanding certifications for our processes, and products.

“The solution to plastic dependency, on a tray.”

EcooCEL range

The EcooCEL range is the sustainable solution for fresh food packaging in Europe. Compostable and recyclable high-performance cellulose trays that replace EPS and PET packaging, mainly.

EcooCEL replicates EPS tray models in all sizes, making the transition to sustainable materials easier and more convenient. The design of these sustainable packaging resists moisture and wrapping film without wear, and is made only from renewable cellulose from agricultural waste that does not compete with food supply.

It has the option of an **absorbent pad**, also **compostable** and **recyclable**.

| MODEL | NAME | EXTERIOR | INTERIOR |
|----------|------------|------------|----------|
| 70 | FUJI | 180×135×20 | 140×95 |
| 8x | VELETA | 215×165×35 | 170×115 |
| 79 | KLIMANJARO | 230×135×35 | 170×85 |
| 80 | MONT BLANC | 230×135×20 | 180×100 |
| 39 | ANETO | 237×173×30 | 175×115 |
| 89 | TAI | 250×180×35 | 185×115 |

| GN1/2h52 | EVEREST | 325×265×52 | 258×198 |
| 4P | MULHACEN | 160×160×22 | 120×120 |

EcooCEL Pad

EcooCEL Pad is a compostable absorbent pad designed for use in EcooCEL trays. It is made from high-absorption cellulose fibers and natural bioplastic material.

Its high capacity to retain liquids is ideal for use in the food industry (up to 1300 gr/m²), while maintaining a soft and comfortable texture. Its cellulose content is over 99%, and it is available in different sizes and thicknesses, allowing it to adapt to your needs.

Why EcooCEL?

Expanded polystyrene takes hundreds of years to degrade in nature and can be ingested by animals, causing harm to their health and the ecosystem. Its recycling is difficult and often not properly separated, making its management more complicated and often ending up in landfills or the environment. Its use for food is increasingly prohibited or restricted.

EcooCEL is the sustainable and ecological alternative for fresh food packaging in Europe. With it, you take care of the environment, offering an attractive and quality presentation of the products.
